

Instruction Page

Black Box Testing Instructions:

For Black Box testing setting up the environment is really easy. Go to this url <http://www.spiton.us/> and it is a live version of the website. Right now the website only works in Chrome so when testing make sure to use a chrome browser. If you don't you will see some things that actually are working, not work as intended. Additionally on our webpage we have an instructions page which will walk you through how to play the game and will start to give you an idea of what the expected output is. Lastly, our website is designed to automatically restart after a crash so do not worry about breaking anything when testing the website.

White Box Testing Instructions:

Installation

- Install MongoDB
- Install [Yarn](#) (and node)
- The config.js files aren't tracked by git, so create from template: (you shouldn't need to change any values)
 - `cp src/config.example.js src/config.js`
 - `cp backend/config.example.js backend/config.js`

##Running

- to run the backend: `yarn run backend`
- to run the frontend: `yarn run start`

##Other

- to use [ESLint](#) to fix style warnings: `yarn run lint:fix`
